## Victron 35 years in business

Victron Energy exists 35 years, a milestone that needs to be celebrated! Therefore, Victron SAIL 2010 was organised, in the middle of SAIL 2010 Amsterdam (The Netherlands). Several boats with a waving Victron-flag sailed through the canals of Amsterdam. In the evening there was a spectacular fireworks show.

## Quattro Family complete! - 10kVA

The Victron Quattro Family has reached a peak: the powerful Quattro 10kVA. This is the first 10kVA unit produced by Victron Energy B.V. The new Quattro 10kVA makes it possible to convert even more power.

### All in one

The Quattro 10000 is a combined inverter/charger with two AC inputs. The Quattro can be connected to two independent AC sources, for example shore-side power and a generator.

### Two AC outputs

All Quattro and several Multi inverter/chargers now have two AC outputs. In addition to the standard no-break output, an auxiliary output is

available which disconnects the connected load during battery operation.

### Unique PowerAssist feature

The Quattro will prevent overload of a limited AC source. First, battery charging will automatically be reduced when otherwise an overload would occur. The second level will boost the output of a generator or shore side supply with power taken from the battery.

### Virtually unlimited power thanks to parallel operation

Up to 6 Quattro's can operate in parallel to achieve higher power output. Three phase or split phase operation is also possible.

## Green sailing yacht 'Ecolution'

On Friday 13 August 2010, the eco-friendly sailing yacht 'Ecolution' was baptized. Ecolution is the first ship build by the Dutch company 'Ecolutions BV'. Victron Energy is sponsor of Ecolution and designed the back-up systems on board of the yacht.

## Victron high up in the mountains

High up in the mountains of Austria, the equipment of Victron Energy almost entirely replaced a diesel generator.

Austria has a highly developed and efficient telephone network. Despite the high mountains, a phone mast from 'Telekom Austria' is receiving and sending out signals. To provide the phone mast with electricity it is connected to a diesel generator. With the equipment of Victron Energy the generator is not needed 24/7 anymore. The result: less noise, less CO2 emissions and less refueling costs.
